Week #5 – Practical Lesson #5

1. Visualforce Page: add Resources and Supplies;
2. Using a button to access the VF Page

Project: Build a Warship App

So, now we improve the app in the code side, let's work on the frontend and improve a little more the app.

Let's work.

Before Start: Is your Developer Org up and running? You added the last code?

Create Visualforce Page

To facilitate the introduction of records, the manager requested to have a place to add Resources and Supplies to a Warship record.

1. You need to create a new Visualforce Page who permits to add a Resource record and a Supply record related with the Warship.
 - Need to check the field do you need to use for each object (Resource__c and Supply__c) and put in the form;
 - Add a Save button;

Add a button

Now you have a Page, lets call from a button.

2. The Warship record will be have a new button who calls the Visualforce page.
