Sistemas de controlo de versões

Manter um histórico de todas as modificações no código fonte.

Comparar, rever, restaurar e juntar diferentes versões dos mesmos ficheiros.

Simplificar a colaboração e a partilha de código.

Os sistemas de controlo de versões permitem saber

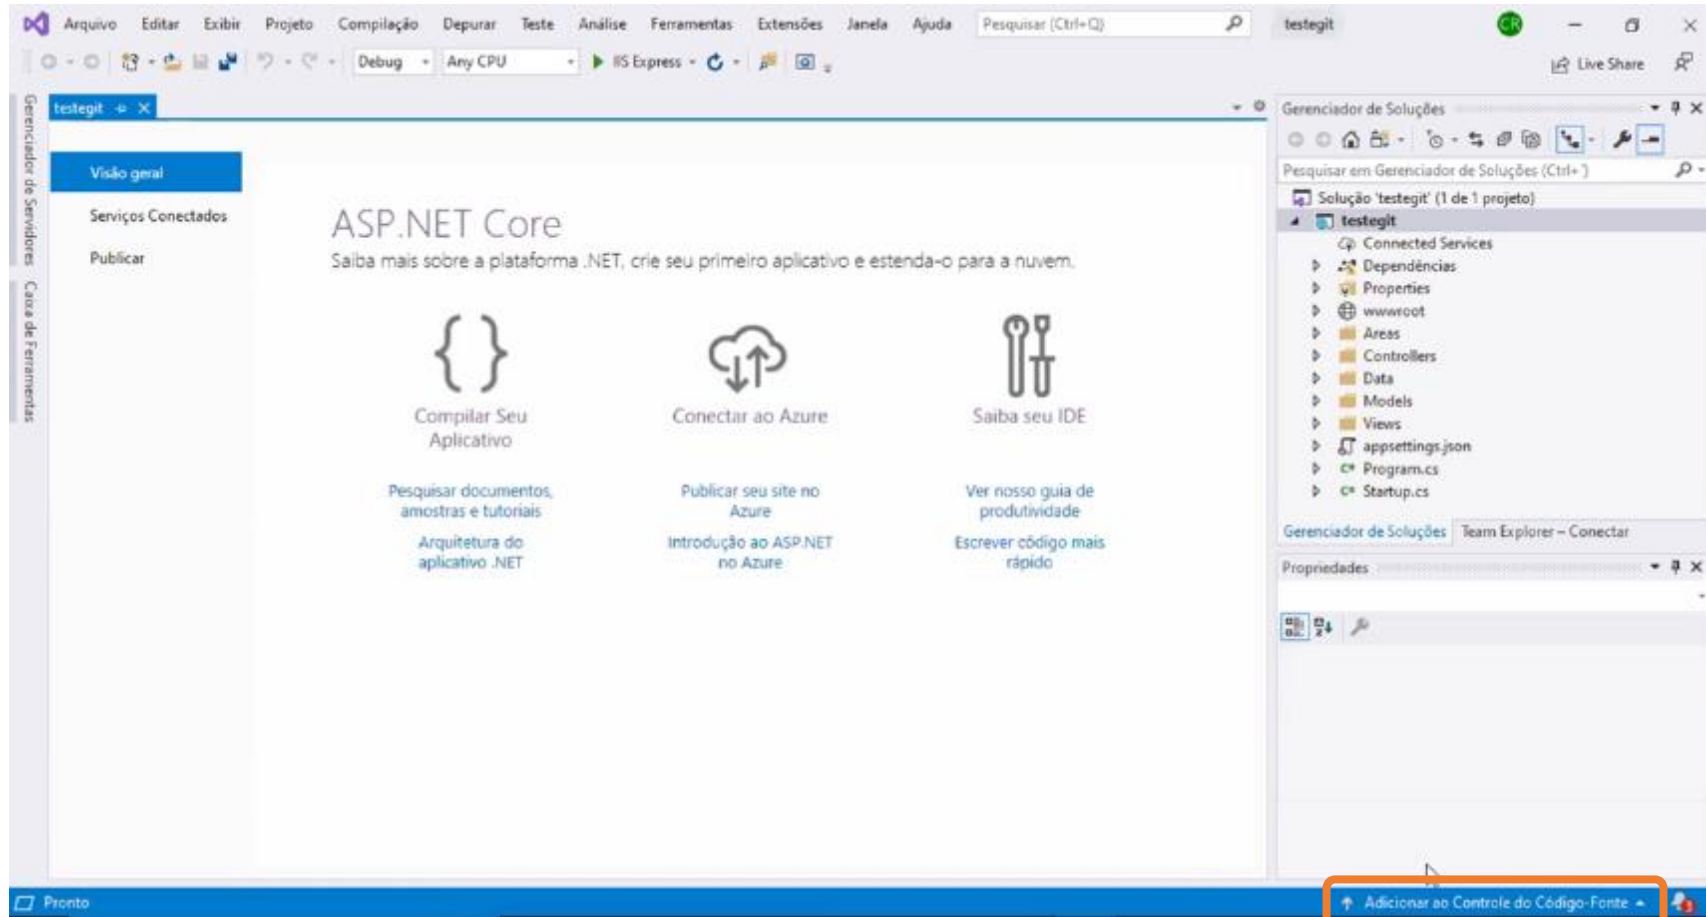

- Que alterações foram feitas
 - Quem fez as alterações
 - Quando foram feitas as alterações
 - Porque foram feitas as alterações
-

Commits e repositórios

- Normalmente o código fica alojado num repositório centralizado (e.g. `github.com`).
- Os novos ficheiros devem ser explicitamente adicionados ao repositório. Cada vez que é feito um commit é guardada a versão atual de cada ficheiro.

The screenshot shows the GitHub interface for a repository named 'testegit'. At the top, there's a dark navigation bar with the GitHub logo, a search bar, and links for Pull requests, Issues, Marketplace, and Explore. Below this, the repository name 'testegit' is displayed with options to Unwatch, Star (1), and Fork (0). A secondary navigation bar includes links for Code, Issues, Pull requests, Actions, Projects, Wiki, Security, Insights, and Settings. The main content area shows a commit by 'CarolinaRei' titled 'Adicionar arquivos de projeto.' with commit hash '73d57f4' and '2 commits' 9 minutes ago. A list of files added is shown: 'testegit', '.gitattributes', '.gitignore', and 'testegit.sln', all added 9 minutes ago. A blue banner at the bottom encourages adding a README. On the right, the 'About' section states 'No description, website, or topics provided.', and the 'Releases' section states 'No releases published' with a link to 'Create a new release'. The 'Packages' section states 'No packages published' with a link to 'Publish your first package'.
